

PEDESTAL READY - HIDDEN LOCK DOWN

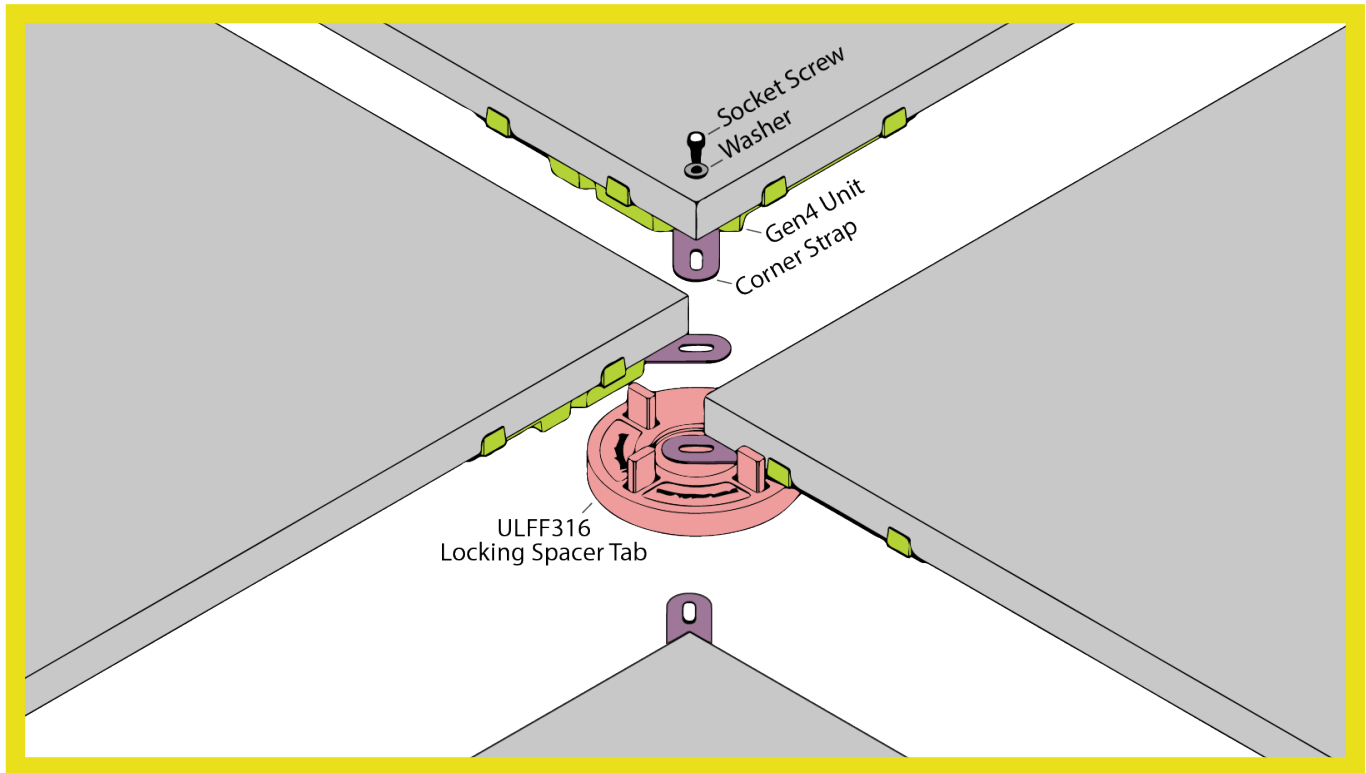

# UnderLock

**NEW**  
**GEN4**

## Product Features

1. Pedestal ready.
2. Precise paver connection under paver surface.
3. Low profile 1.125 inch thickness on the pedestal.
4. Installed paver is easily unlocked and removed for roof access.

## PEDESTAL READY PORCELAIN PAVERS

Gen4 square format

Gen4 plank format with running bond brick pattern

### Product Description:

UnderLock is a pedestal-ready, hidden lock down porcelain paver. Safety and lock down are a part of the paver. No trays, sub grid, glue or added labor required, making UnderLock the most versatile and safest stand-alone porcelain paver on the market.

### Hidden Lock Down:

Patented, stacked corner straps secured at intersections create a flexible paver raft under the surface. The net effect is an extremely heavy individual paver as it is locked to all others in the field. (You lift one, you lift them all.)

### Industry Tested:

ANSI/FM 4474 (2011) Appendix B - Modified  
Result: maximum passing load from pull: 1,260 lbf

### Summary of Benefits:

1. Stealthily safeguards against lift from wind forces or vandals.
2. Rigid composite paver back. If the paver breaks, it is held together and will not fall through.
3. Easy removal of any installed paver to access drains, membrane, or utilities below surface.
4. No grinding, cutting or kerfs on the paver.
5. Many sizes and styles of pavers available.
6. Running bond patterns easily done.
7. Pedestal ready, saving time, money, and peace of mind as the key components are factory made and not contractor installed on site.
